

# RI 700 Carrier-to-Noise Generator, 0.5-2.7 GHz, 8 ch

## Wideband Carrier-to-Noise Generator with high dynamic range and web browser user interface

### Features:

- 0.5 - 2.7 GHz signal and noise frequency range
- -93 dBm/Hz maximum noise spectral density
- 81 dB SNR range
- 8 channels with uncorrelated noise sources
- $\pm 3$  dB noise flatness over full band
- $< 0.1$  dB/ $^{\circ}$ C noise stability over temperature
- Internal webserver
- Configurable IP settings
- 19", 2HU rackmountable chassis

### Overview

The Ranatec RI 700 is a wideband Carrier-to-Noise Generator with 8 separate channels. Noise spectral density can be set to any value between -174 and -93 dBm/Hz in 0.5 dB steps.

### Hardware architecture

Each channel has a separate noise source which means that all channels are uncorrelated. Each channel has an internal combiner that is used to add the controlled noise to the user carrier. The SNR of the user carrier can then be controlled by adding a suitable amount of noise. By adding the SNR option, the carrier-to-noise ratio is accurately calibrated and monitored. The user has the possibility to enter C/N0 through the web interface.

Ranatec RI 700 is a wideband Carrier-to-Noise Generator for remote controlled applications.

### Software architecture

As default, the instrument is controlled through a web interface. The output spectral density of each channel is set in any web browser, totally independant of operating system. This feature also gives the possibility to control the instrument over internet, independant of geographical position.

If you need to control it in another way, there are options available for all standard communication interfaces.

### Applications

The RI 700 is designed to cover all cellular bands, making it ideal for applications such as:

- BER test
- Receiver test
- Handover test

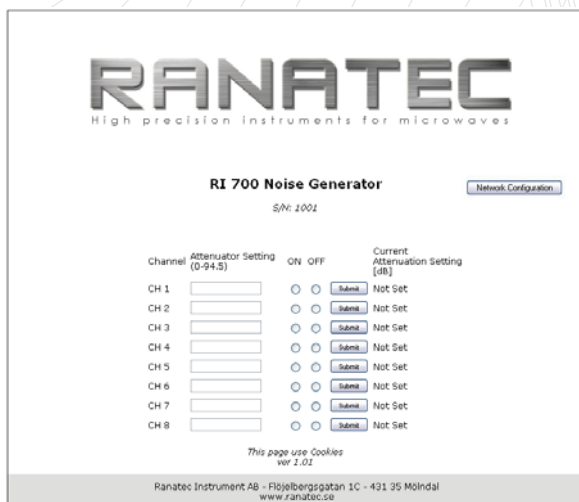

### Ordering

RI 700  
RI 700 - XX  
Option SNR

Option RS232  
Option GPIB  
Option LAN

Option MMI

8 channel Noise Generator  
XX channel Noise Generator  
Adds full Carrier-to-Noise Generator functionality  
Remote control via RS232  
Remote control via GPIB  
Remote control via LAN (emulated COM port)  
Adds control via touchscreen display

The output spectral density of each channel is controlled individually
